

# Visibility is a Threat. Obscurity is Power.

## ObscureIQ Digital Executive Protection

Elite privacy services and data suppression for people with everything to lose.

### The Stakes: Why It Matters Now

Every exposed data point is a liability. Every online trace is a potential weapon.

Even a small trace of exposed data can spiral into reputational damage, digital harassment, or physical risk. ObscureIQ's Digital Executive Protection program is built for high-profile individuals - executives, founders, and public figures - who need to stay private, protected, and in control.

For our clients, privacy isn't a preference. It's operational security.

### Our Privacy + Intelligence Services Stack

#### 01: Threat Surface Mapping

Footprint Audits reveal your full digital exposure. This is a threat surface many still neglect and includes: data brokers, the dark web, and public records. Clients are amazed (and sometimes horrified) by what's out there and easily accessible.

#### 02: Deep Data Suppression

Footprint Wipe and Bespoke Deletes remove traceable information. No one offers a wider or deeper deletion service.

#### 03: Threat Investigations

We provide offensive OSINT research on stalkers, harassers, and threat actors.

#### 04: Active Threat Monitoring

Get real-time alerts when you've been doxxed or threatened. We scan for leaks and threats with the best tooling, adding our own proprietary systems. The coverage is wide: social media, news, darknet forums, paste sites, the clear net, and more. We detect patterns, context, intent, location. AI and human review escalate verified risks to you fast.

#### 05: Strategic Consulting

We offer training and advice for clients as well as their family members, and internal security teams. We even train organizations.

## Why ObscureIQ?

Built by Intelligence Professionals. Trusted by High-Stakes Clients.

Powered by proprietary tech and CODEX, an exclusive dataset of over 8,600 surveillance orgs.

Operated by world-class privacy and threat researchers with unique knowledge.

Trusted by executives, politicians, activists, celebrities, and cybersecurity firms.

## Our Process

- **Onboard & Profile:** You give us your basic identifiers. We take it from there.
- **Map & Assess:** We surface every traceable threat - across public web, data brokers, dark web, and OSINT datasets. Our Audits reveal risks and ferret out lost selectors.
- **Wipe & Suppress:** We execute high-volume removals and bespoke deletions based on your risk profile. Selectors found in your Audit aid in a deeper delete.
- **Monitor & Defend:** Continuous scanning and real-time threat alerts keep you ahead of the next breach. Proprietary processes + the best tooling available.
- **Empower & Advise:** We train your team and provide long-term strategies for maintaining your edge.

## Privacy x Intelligence: The ObscureIQ Equation

Most firms specialize in either hiding information or finding it. We do both.

ObscureIQ fuses **elite privacy advocacy** - data deletion, legal leverage, and deep broker ecosystem knowledge - with **advanced open-source intelligence** (OSINT) capabilities.

We don't just erase your trail; we understand exactly how that trail is followed, profiled, and weaponized.

This **rare combination** allows us to defend more aggressively, respond more intelligently, and deliver results others can't. When privacy and intelligence work in tandem, your footprint shrinks faster - and your defenses grow sharper.
